

**VIRTUSAFE**

A ZENTECH COMPANY

Our VR  
platform  
doesn't just  
showcase  
your facility;  
it transforms  
how you  
train, plan,  
promote,  
and protect.

Your VR capture becomes a multi-use asset that can serve a dozen different operational needs from onboarding to marketing to emergency planning.

It's budget-friendly, easily updated, and provides unmatched accessibility to your environment without disrupting patient care.

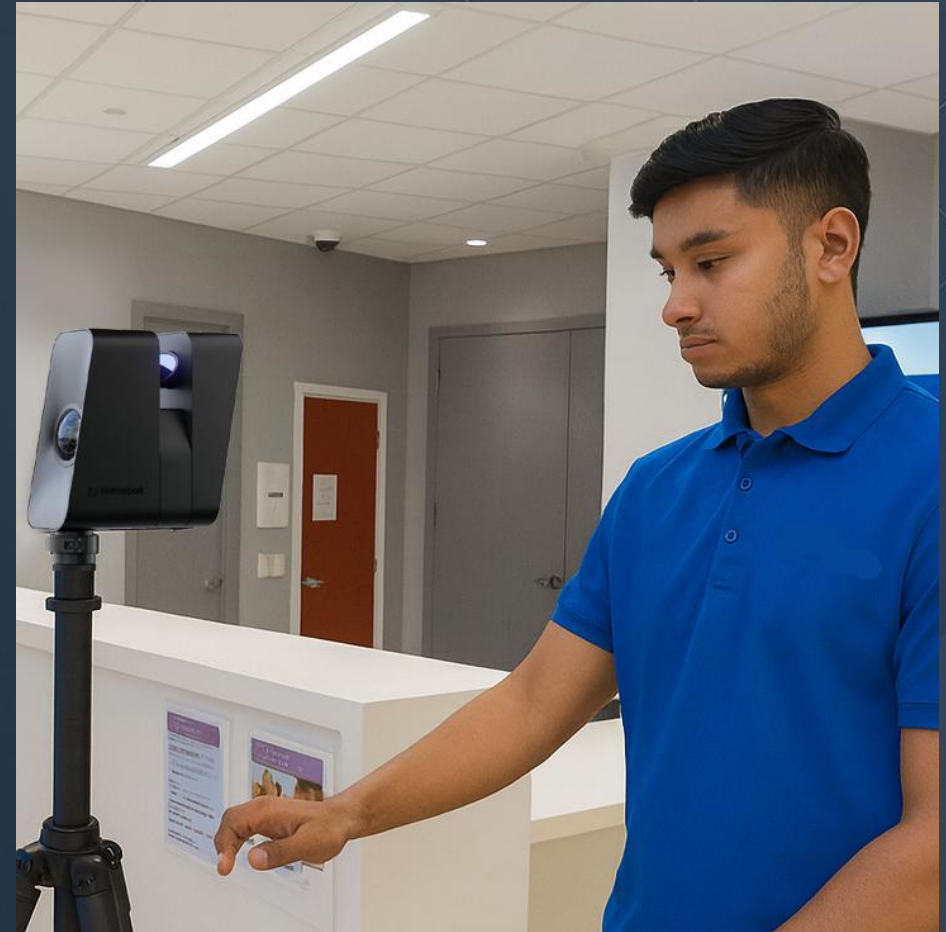

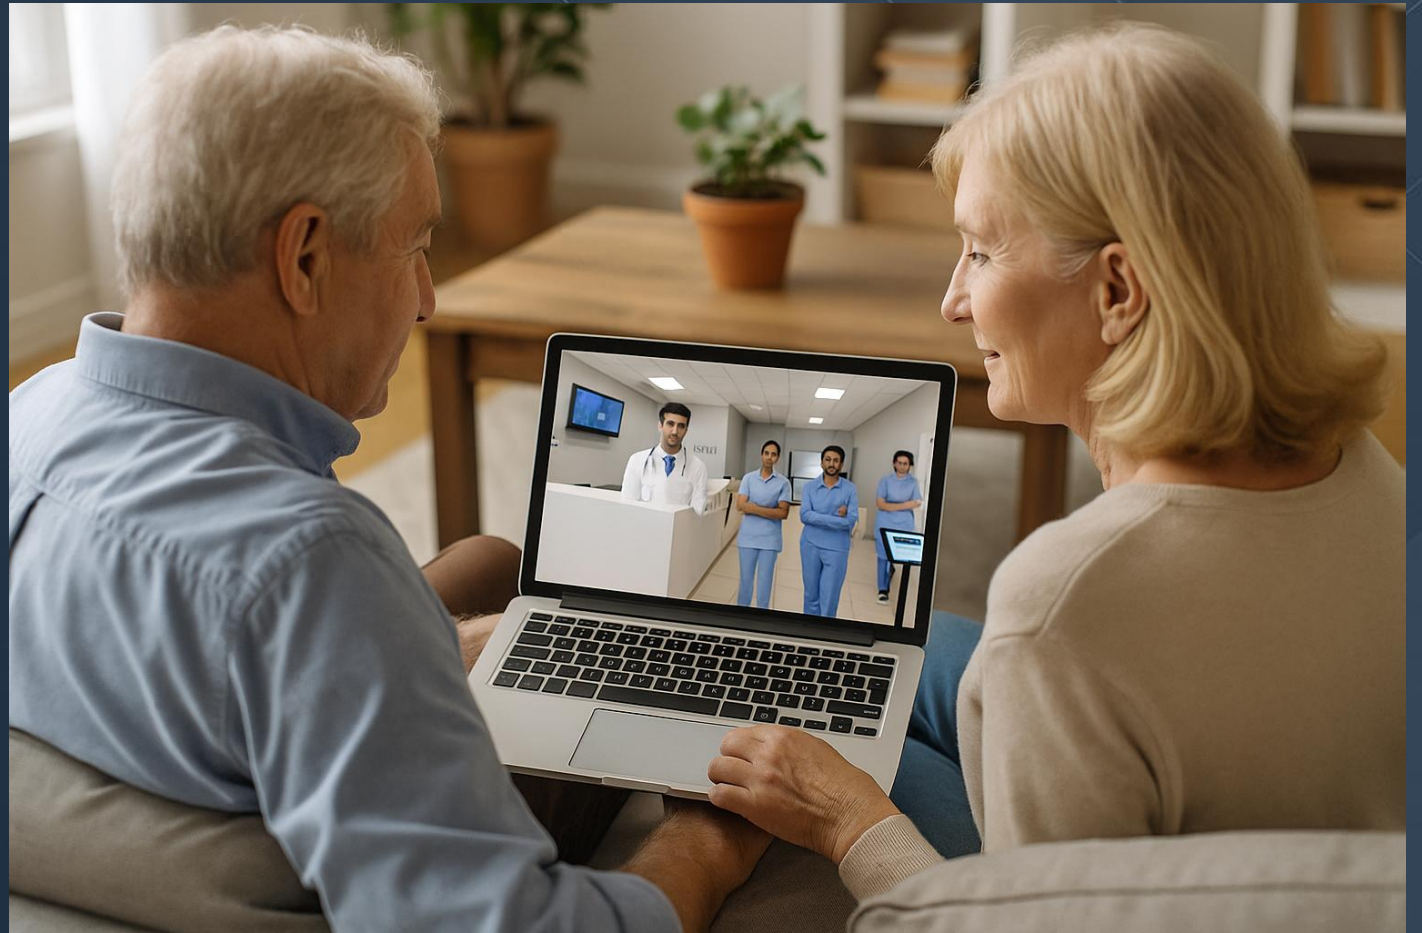

Using VirtuSafe's methodology, your capture is a modular solution designed for real-world budgets and incremental implementation.

The process is non-intrusive, respectful of privacy, and completed with precision and efficiency.

VirtuSafe's VR experiences offer a powerful tool for medical tourism. Potential clients can explore your facility in full detail before they ever schedule their journey.

Prepare your team  
for the unexpected.  
Our VR capture can  
be overlaid with  
custom safety and  
security training  
modules, allowing  
staff to navigate  
realistic scenarios.

Enhance the patient experience by integrating virtual navigation tools. Patients and visitors can explore the facility before arrival, reducing anxiety and confusion.

Using a real-world digital replica of your facility, VirtuSafe enables advanced risk assessments and emergency planning like never before.

With a VR tour, you can immerse new hires in the facility layout, safety protocols, and culture before they ever clock in for their first day on site.

As your facility evolves, so can your VR environment.

NEW  
ADDITION

**VIRTUSAFE**

**Capturing your facility's future.**
